SPOTLIGHT

Gladiolus

King of the Summer Cut Flowers

Gladiolus may be planted any time from early spring to June; planting at intervals will prolong the blooming season.

Any good garden soil is satisfactory but must be well drained. Plant 5 to 6 inches deep.

If commercial fertilizer is used it should be well mixed with the soil. If manure is used it should not come in contact with the bulb. A light top dressing of fish meal tankage or sheep guano will be very beneficial when the flower buds begin to show.

If thrips are prevalent in your community it will be wise to start spraying or dusting your plants when they are about six to eight inches high, using either a water soluble 50% DDT spray or 5% DDT dust.
